Pendant adapter

Design your lighting experience with freedom and versatility. Lucide track lighting delivers simplicity without compromising on captivating design.

Expand your track lighting with the pendant adapter. Add Lucide pendant lamps effortlessly! Unlock infinite possibilities for customization. Elevate your lighting setup and unleash your creativity.

Installation guide

Tip: The track system has 2 different sides. One side with 1 groove and the other side with 2 grooves, which contains the protective conductor. Make sure that every added object is positioned in the right direction.

Choose the placement of your track system. Determine where the power point will be: the mounting house will be placed here. Always switch off the power before you start working.

Use the floor to lay-out how the track system should look on the ceiling. Connect all the different pieces in advance so that everything fits together correctly. Consider where the mounting house should be, this can be anywhere along the track system.

Connect the electrical wires in the mounting house to the electrical wires of the power point with the luster terminal.

Extend the track system with the rails according to your plan. Use different connection pieces if necessary. Start from the power point and work towards your chosen end point.

Tip: Use a cross-line laser to mount the track system in a straight line to the ceiling.

Add your selected lamps to the track system. Use the adapter located on top of the lamp.

- Place two fingers on the adapter and push downwards.
- Place the top section of the adapter in the track with the pins facing the same direction as the track.
- Twist the adapter clock- or counterclockwise.
- The 2 pins of the adapter need to turn to the side of the track with two grooves.
- If you let go of the adapter and feel it click you've mounted the light correctly.

Complete the track system with the end caps and rail cover for a flawless end result.
